

## Newsletter from Pivab – Innovators in Automatic Rewinding

### Dependable and durable

Pivab had the chance to move a rewinder built in 2003 from UK to our factory in Sweden for service and modifications and then deliver the machine to a customer in France. We take great pride in the fact that our machines are dependable and work for so many years.

During the year of 2018 we also built three new fully automatic rewinders where two were delivered to Poland and one to France.

*Pivab rewinder from 2003 that been moved from a VPK factory in the UK at Ondulys Andelle, France.*

*New installation of Pivab rewinder SFC 2583 2.5m at Cartonneries de Gondardennes, France.*

### Production volumes

Production quantities vary from customer to customer and some that are exclusively producing rolls are able to produce more than 500Km/week.

We can also see that during the last few years customers are steadily increasing production. This show evidence that the interest in single face rolls is higher than ever before.

### Connecting rewinders to factory planning systems.

We have seen a large increase in customers wanting to connect their machines to the factory planning systems and we have been working with many customers and their contractors to make the implementations. We provide the logic in the rewinder to handle recipes coming from planning system and present production data that the system can read.

Pivab Machinery is a Swedish company that specializes in manufacturing rewinders for single face corrugated web. The company was founded in 1983 and has a long tradition of product innovation and machine design according to customer requirements.

These special machines for the single face market, whether used in traditional corrugated or laminating production environments, are easily installed with basic connections to lines dedicated to single face operations or at the end of existing corrugators.

The Pivab rewinders offer good opportunities to production cost savings in the single face market.

Please contact us if you have any questions or if you would like to have a quotation. Product video and pamphlets are also available for download on our website. [www.pivab.com](http://www.pivab.com)
