

Bed sheet manufacturing line

Pivab successfully installed the disposable bed sheet line in Finland delivered in February this year. The sheets are manufactured from two layers of paper and one layer of PE which are unwinded from rolls and laminated together with hot melt glue. The machine then folds the material lengthwise before it is cut to the desired lengths with a crosscutting knife. Thereafter the sheets are cross folded twice before they are stacked. Finally the stack is strapped with a paper strip before packed in boxes. The line has so far produced about 1.5 million disposable bed sheets for the elderly care.

3 layers of material are laminated to form the bed sheet.

New rubber membrane rewriter

Pivab is manufacturing new custom made machinery for winding and packing Butyl and EPDM membranes for SealEco in Sweden. The membrane is rewinded from a pile of material onto paper cores and cut to custom lengths. The rolls are then sealed with stretch film and packed with a portal robot into predefined patterns on pallets. The rewriter is equipped with an automatic core feeder, automatic web guide and sensitive tensioning equipment.

Yet another single face rewriter for Poland

Pivab is now in final assembly and testing of a new fully automatic single face rewriter for Werner Kenkel which is one of the largest privately own corrugated packaging producers in Poland. The rewriter will work together with the corrugating line and is, amongst other things, equipped with a newly developed automatic knife positioning system and automatic tape positioning.

Single face rewriter in final production at Pivab's plant.

Pivab Machinery is a Swedish company that specializes in manufacturing rewinders for single face corrugated web. The company was founded in 1983 and has a long tradition of product innovation and machine design according to customer requirements.

These special machines for the single face market, whether used in traditional corrugated or laminating production environments, are easily installed with basic connections to lines dedicated to single face operations or at the end of existing corrugators.

The Pivab rewinders offer good opportunities to production cost savings in the single face market.
