

Newsletter from Pivab – Innovators in Automatic Rewinding

IKEA on the roll.

Pivab has finalized installation of a fully automatic rewinder to one of the world's largest furniture manufacturers, Swedwood in Poland, a fully integrated international industrial group of IKEA. The rewinder was specially developed to slit and rewind thin stripes according to customer specified requirements.

The first 2.8-meter machine.

In 2002 Pivab had a "Factory day" at Wellformat in Herford, Germany, where one of the first fully automatic rewinders were displayed. This event led to the acquaintance of many of Pivab's current contacts in Europe. Monowell who is part of the Palm-group has since then been one of Pivab's contacts. Now Pivab has started the production of a 2.8m wide fully automatic rewinder with several options, such as lateral web control, automatic knife positioning system and automatic core feeder to be placed at Monowell's factory in Sinsheim, Germany. Perhaps "Factory day" is to thank for the current trade.

Now Pivab is also in Africa.

Pivab has successfully installed a semiautomatic rewinder in one of the poorest countries of the world, Ethiopia. Unlimited packaging P.L.C. has started production of single face rolls commonly used as packaging material in the flower industry. Installation of a Swedish machine in East Africa was a different and pleasing experience with lots of memorable moments for Pivab staff.

Pivab Machinery is a Swedish company that specializes in manufacturing rewinders for single face corrugated web. The company was founded in 1983 and has a long tradition of product innovation and machine design according to customer requirements.

These special machines for the single face market, whether used in traditional corrugated or laminating production environments, are easily installed with basic connections to lines dedicated to single face operations or at the end of existing corrugators.

The Pivab rewinders offer good opportunities to production cost savings in the single face market.
