

Accessories for converting of Re-board®

Re-board® converting accessories from Pivab

Pivab has designed, produced and installed a complete production line for sandwich boards trademarked as Re-board®. The Re-board® is now globally introduced and well received on the market. To pull use of all the advantages that Re-board® offers a number of different converting accessories have been developed by PIVAB Machinery AB.

Edge Banding Machine 3201

This machine is used when applying a plastic edge strip on Re-board® with hot-melt glue. The machine comprises a table on which the operator places the board that is to be supplied with an edging strip. The edge strip is then pressed securely onto the Re-board®

Re-board® Liner Remover

When working with converting of Re-boards a need for partial removal of the outer layer, mentioned the liner, often arises. This tool is a good help in such a situation. It is delivered with tools for removing 30 and 50 mm width of the liner.

Accessories for converting of Re-board®

Punch for Re-board® Edge Stripes

This is a machine which facilitates usage of different fasteners when using Re-board® in a number of different applications. It opens up a convenient way of applying Screws when there is a need for attaching boards together or other devices to a board. The punch is pneumatic driven unit controlled via a foot pedal. Easy change of internal punch tools with different shapes is one obvious advantage.

Partial pluckier for Reboard®

The partial pluckier tool is used for removing pieces of the board for insertions of connecting boards. It removes 50x16mm material at a time. The Pluckier tool is pneumatically driven so air supply is needed.
