

Accessories for converting of SB Fibre® & Re-board®

SB Fibre® & Re-board® converting accessories from Pivab

Pivab has designed, produced and installed a complete production line for sandwich boards trademarked as SB Fibre® & Re-board®. The product is now globally introduced and well received on the market. To pull use of all the advantages that this product offers a number of different converting accessories have been developed by PIVAB Machinery AB.

Edge Banding Machine 3201 SB Fibre® & Re-board®

This machine is used when applying a plastic edge strip on SB Fibre®/Re-board® with hot-melt glue. The machine comprises a table on which the operator places the board that is to be supplied with an edging strip. The edge strip is then pressed securely onto the board.

Liner Remover SB Fibre® & Re-board®

When working with converting of board a need for partial removal of the outer layer, mentioned the liner, often arises. This tool is a good help in such a situation. It is delivered with tools for removing 30 and 50 mm width of the liner.

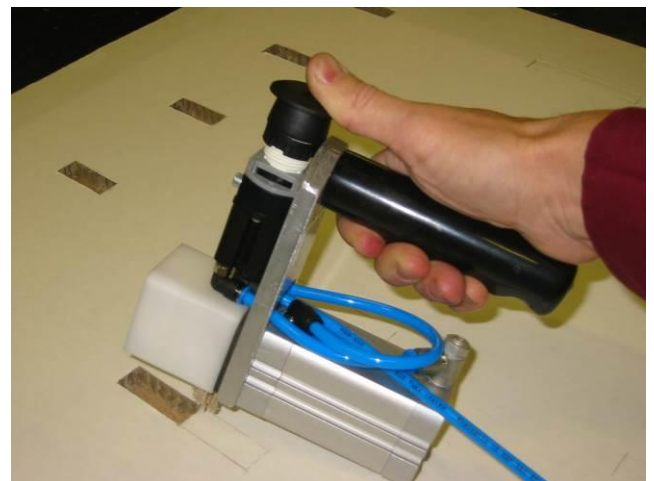

Accessories for converting of SB Fibre® & Re-board®

Punch for Edge Stripes SB Fibre® & Re-board®

This is a machine which facilitates usage of different fasteners when using SB Fibre®/Re-board® in a number of different applications. It opens up a convenient way of applying Screws when there is a need for attaching boards together or other devices to a board. The punch is pneumatic driven unit controlled via a foot pedal. Easy change of internal punch tools with different shapes is one obvious advantage.

Partial pluckier SB Fibre® & Re-board®

The partial pluckier tool is used for removing pieces of the board for insertions of connecting boards. It removes 50x16mm material at a time. The Pluckier tool is pneumatically driven so air supply is needed.
